

# How can I match multiple words or phrases in the Subject, Message or Header fields?

You can string words or phrases together in the Subject, Message, and Header fields by separating them with a space character. Group phrases together with double quote characters. For Example to match the exact phrase "quick brown" in the following Subject:

The **quick brown** fox jumps over the lazy dog

Configure the Subject field as follows:

The screenshot shows a window titled "Other properties" with a light blue header. Inside, there are two rows. The first row is for the "Subject" field, with a dropdown menu set to "All" and a text input field containing the text "quick brown". The second row is for the "Message" field, with a dropdown menu set to "All" and an empty text input field.

To match messages which contain the word **quick** or the word **brown**, configure the Subject as follows. Make sure you choose **Any** to match either word.

The screenshot shows a window titled "Other properties" with a light blue header. Inside, there are two rows. The first row is for the "Subject" field, with a dropdown menu set to "Any" and a text input field containing the text "quick brown". The second row is for the "Message" field, with a dropdown menu set to "All" and an empty text input field.

This same concept also works in the Message and Header fields.
