

What are the new features in Auto-Mate v6.0?

New Improved User Interface

-

Fluent Ribbon User Interface - easy to use, consistent with the Microsoft Office user interface design.

-

Improved Rule Manager - brand new design with updated filtering and new rule categories for better

organization.

-

Improved Searching - toolbar style searching.

-

Office 2007 and 2010 Skins - Choose from nine different skins and custom colors for the application

button.

-

Create rules from Message Reading window via Ribbon Interface.

-

Improved rule execution status - dialog with progress bar and cancel button.

-

Other usability features.

Quick Rule Templates

-

Creating common rules is easier than ever! 1-2 clicks - File To Folder, File After Reading, File After

Replying, File After Forwarding, Archive Old Mail, Reduce Mailbox Storage, Remove Duplicates,

Custom Rule.

-

Auto Select Addresses - automatically fills in addresses based on the current email.

-

Auto-Suggest Destination folder - the destination folder will be suggested automatically based on your

folder naming habits.

Rule Enhancements

-

Support for SharePoint Message Types.

-

Replicate your Outlook folder structure automatically when moving messages to folders.

-

Support for Counters that can be used for rule properties and actions - Use counters to perform very

basic logic expressions in your rules, and/or to provide uniqueness in message exporting and

attachment file names.

-

Subject Action Enhancements. Easily modify the Subject of messages with a variety of options.

-

When detaching messages attachments, Auto-Mate can retain the Outlook attachment icon

(paperclip).

-

Print action can be configured to print attachments only and omit printing the message body.

Other

-

Import Native Outlook Rules - Import your existing Outlook rules and automatically convert them to

Auto-Mate format.

-

Faster rule execution - on receive and on send rules only execute rules that are configured to match

addresses from the received (or sent) messages. This eliminates the need to execute all rules when

a new message is received (or sent). This new rule execution method significantly reduces the

processing time for rules.
