

How does Auto-Mate run rules when set to automatic mode?

Auto-Mate runs rules automatically based on the rule type configured.

Rule Type	When the rule executes in Automatic mode
Scan messages when they arrive in my Inbox	Shortly after new messages arrive in your inbox
Scan messages after I send them	Shortly after you send a new message
Scan messages after receiving them or sending them	Shortly after new messages arrive in your inbox and Shortly after you send a new message
After I reply to a message	Shortly after you reply to a message
After I forward a message	Shortly after you forward a message
Scan messages after a period of time in a folder	Once per hour, or if the Older than time is set to 15 minutes, then every 15 minutes. These times are aligned with the clock.
Scan messages when they are added to a folder	Shortly after new messages are added to a folder
If message(s) do not exist in a folder	Once per hour, or if the Older than time is set to 15 minutes, then every 15 minutes. These times are aligned with the clock.
Execute Actions on a schedule	Automatic mode not applicable. This rule only runs on the day and time you configure.
Scan for duplicate messages	Once per hour, or if the Older than time is set to 15 minutes, then every 15 minutes. These times are aligned with the clock.
